

Vitoss® BA

Bioactive Bone Graft Substitute

By combining bioactivity with the leading bone graft substitute technology...

The #1 Synthetic Bone Graft* Just Got Better!

VITOSS BA immediately begins to react once implanted, releasing ionic constituents (Si^+ and Na^+) into the environment. Osteoblasts are stimulated by the released Si^+ and Na^+ ions. The release of these ions attracts cells to the scaffold surface and causes cells to increase the rate of proliferation, protein production, and bone formation.*

VITOSS Bioactive Foam has been shown to increase the rate of bone formation and healing compared to traditional osteoconductive scaffolds.*

To learn more of the advantages of VITOSS go to www.orthovita.com or contact 1-888-774-8870.
